

Topic Module Computer Laboratory	Hydrological Modelling	
	1.	Surface Water Modelling
	1	Development of a HEC-HMS model

Hydrological models are used for a wide range of applications in engineering. The aim of this computer laboratory is to develop skills in setting up and running a commonly used hydrological model, the Hydrologic Engineering Center (HEC) – Hydrological Modelling System (HMS).

Learning outcomes

After completing this computer laboratory, you will be able to:

- Explain the different elements of HEC-HMS and the required input data.
- Develop a new HEC-HMS project with a single sub-basin model.
- Run a HEC-HMS simulation for a rainfall event and interpret the model's output.

Instructions

Instructions are provided in a separate presentation file.
